

Moisture Register Products

a division of AQUA Measure Instrument Co.

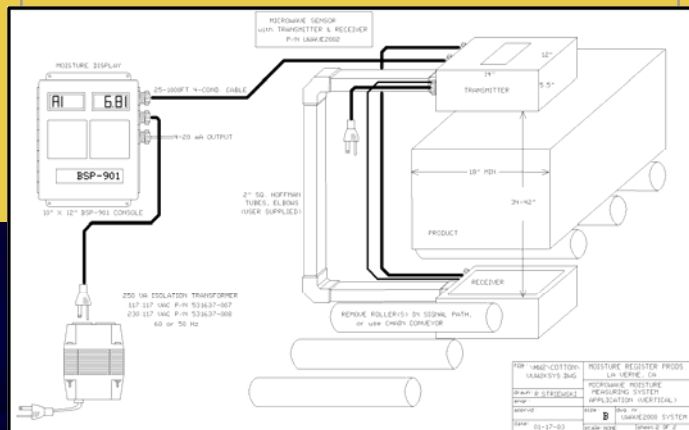

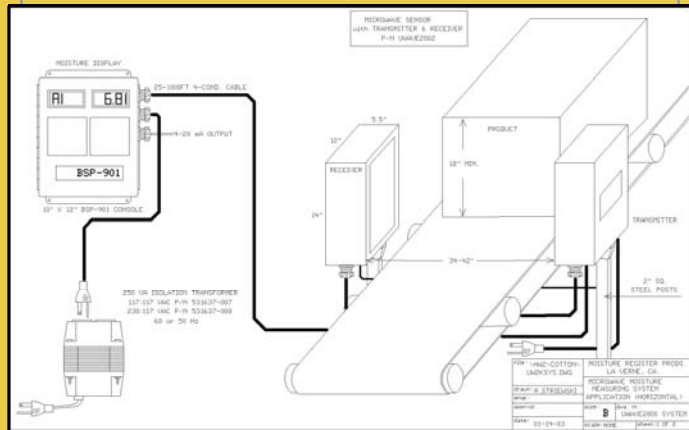

BSP-901-uWave Microwave Moisture Analyzer

- ▶ Digital Percent Moisture Display
- ▶ Complies with FCC Part 18 rules
- ▶ Ideal for large bales of cotton or paper
- ▶ Simple installation and initial set-up
- ▶ Measures water clear through the bale

The uWave Sensor has been designed to be compatible with the BSP-901 Console to make a complete Bale Moisture Measurement and Display System. It provides all the proven features of the BSP-901 System now for bale applications.

A transmitter and receiver are placed on each side (or top and bottom) of the bale to allow microwave energy from the transmitter to pass through the bale to the receiver. Some energy is lost due to the moisture in the bale, and this loss is related to the bale moisture.

Proprietary algorithms are used in the signal processing to minimize the effect of any metallic strapping on the bale, and to provide a measurement of the total amount of water in the bale.
