Model DA8 All Purpose Digital Moisture Meter

- ▶ Simplified Custom Calibration
- ▶ Eliminates Guesswork
- ▶ 0 to 25.5 percent Moisture Range
- ▶ Extra Large LCD Readout
- ▶ Stores 99 Calibrations

The Model DA8 provides instant moisture readings on a wide variety of materials. Custom calibrations eliminate the need for guesswork and comparison charts, and guarantee that moisture readings are accurate and product specific. Custom calibration curves of up to seven points are easily entered using the touch pad controls on the face of the instrument.

The Model DA8 can be used on most non-metallic products in the 0-25.5% moisture range. It has been very successful in determining the moisture content of carpet, yam, cloth, non-woven, paper, paperboard, gypsum board, fiberglass, roofing paper and wood. An extra large LCD readout shows the moisture content in direct percent, and makes chart comparisons and difficult to read meter dials obsolete. Testing is non-destructive, and the DA8 is equipped with four sensitivity ranges.

The secret to the versatility of the DA8 is in how the electrodes are arranged. Seventeen small, button shaped electrodes are placed in a circular pattern, which ensures good contact with curved and rough surfaces.
