a division of AQUA Measure Instrument Co.

Model DC-2011 & Model DC-2011-C Portable Moisture Meter for Corks

- ▶ Digital Reading in the 4 to 22 Percent Moisture Content Range
- ▶ Microprocessor based with large LCD Display for easy reading
- ▶ Field tested by qualified vintners
- ▶ Complete with Battery, Manual and Needles or Electrode with Needles (depending on version)

The Model DC-2011 is specifically designed and calibrated for testing moisture content in cork. The Model DC-2011 determines the moisture content by means of a DC resistance circuit which measures the total current which moisture causes to flow between the needle electrodes. The auto ranging display reads in direct moisture content percent.

By testing your corks for moisture content with the Model DC-2011, this meter can reduce or eliminate profit loss or customer product rejection due to:

- Oxygen seepage causing product spoilage
- Product evaporation and leakage
- Degradation of product quality
- Poor cork compressibility
- Floating cork dust
- Cracked corks
- Too dry or brittle corks

The Model DC-2011 has two built-in needles for fast production testing and an auto ranging feature for automatic adjustment to different moisture ranges. A self-diagnostic routine and a low battery indicator make the Model DC-2011 reliable and easy to use.

The Model DC-2011-C

The DC-2011-C comes with an external cable with a twin needle Electrode for easy insertion into the cork for instantaneous moisture measurement and permits testing on the receiving dock or in any other plant area.
