NIR Test Plate

The NIR TEST PLATE provides a quick and easy way to verify the results obtained by *Moisture Register Products'* NIR Sensor.

The NIR TEST PLATE consists of a black anodized aluminum frame with a ceramic disk protected by a Pyrex glass window. The NIR TEST PLATE is attached to the Sensor's lamp housing so that the light image is centered on the glass disk. Your NIR Sensor will now register a single, repeatable Calibration Signal. This is your NIR TEST PLATE reading.

Take the NIR TEST PLATE readings and record them in a log each day or as needed. If there is a need to check the system at any point you will be able to simply compare the current NIR TEST PLATE reading against the recorded NIR TEST PLATE readings. Any system malfunction will show as a gross deviation in NIR TEST PLATE readings.
